

Computer Architecture: Make the Work Durable

Aug. 27 orientation review

COMSC 3013

The course habit

AI and tools can propose.

Evidence and a human decision make the result trustworthy.

The path Jeremy demonstrated

- ① Sign in through SWOSU Office 365 / SSO.
- ② Open Copilot and the available ChatGPT workspace.
- ③ Work from the course repository.
- ④ Run Python/readiness checks.
- ⑤ Save the result as a durable artifact.

What counts as durable?

- Source file + clear name
- Repository history
- Reproducible command or workflow
- Evidence of what worked and what failed
- A short explanation another person can inspect

Failure is part of the evidence

When stuck

Expected → Actual → Tried

Do not conceal an install/path/tool error. Record it, ask a bounded question, and preserve the useful output.

Safety and judgment

- University workspaces are not public social media.
- Do not paste private data into an unapproved tool.
- Use the smallest adequate model.
- Ask a human to choose when there are divergent consequential paths.

Your next move

- ① Open 'weeks/week-02/'.
- ② Run the documented readiness check.
- ③ Save one small evidence-backed artifact.
- ④ Commit it with a useful message.
